

Review

SellFolio is a complete and easy-to-use solution for developing Flash Websites. The software can also be used to develop presentations in flash and requires virtually no programming skills. The application is powerful and feature-rich, with as many as 18 ready-to-use templates and 10 music files, which are free. Another advantage of using the SellFolio application is that it allows full customization of existing templates along with the power to create new designs and websites from scratch. Users can use this software for adding an unlimited number of images, video files, music loops and other essential resources to their websites and presentations, in order to increase both their monetary worth and expressive value. The software features an integrated one-click upload facility for its users, so that they can easily upload their files to a server. SellFolio makes the task of creating the websites and presentations easier by guiding its user through a well-directed 8-step Wizard's interface. Users can also burn their project to a CD/DVD from within the software interface itself. The program is compatible with almost all commonly used versions of Microsoft Windows such as Microsoft 98, 2000, NT, XP and Me.
